

Get your Personal Access Token

1. Go to the terminal and introduce yourself: **Chapter 7 (happy git)**

```
git config --global user.name 'Nii Okine'  
git config --global user.email 'okinean@appstate.edu'  
git config --global --list
```

In my case the credential helper is set to time out of 10,000, 000 seconds

2. If your credential helper is not set up like mine, do the following: **Chapter 9.5.3, (happy git)**

```
git config --global credential.helper 'cache --timeout=10000000'
```

3. Now run the global list command, now you should see the time out setup

```
git config --global --list
```

4. Now we are ready to set up our credentials for our Personal Access Token (PAT) ,
Chapter 9 (happy git)

Go to the **console** and type (if you don't have the *usethis* package you have to install)

```
usethis::create_github_token()
```

select: NO EXPIRATION and generate token and copy

5. Now store your credentials

```
gitcreds::gitcreds_set()
```

Choose **replace** (I just deleted mine), and enter new token

6. Now we are done, we have introduced ourselves and set up our PAT and now we do not need to enter password every time we want to communicate with Github.
